

1 CLAIM 1

2 An alarm system comprising the following elements:

3 (a) a timer mechanism;

4 (b) a caller mechanism having an interconnected sound recorder, said recorder having

5 a ring detector to activate said sound recorder;

6 (c) an audio amplifier interconnected to said sound recorder said audio amplifier being

7 interconnected to a sound speaker;

8 (d) an And Gate interconnected between said sound recorder and said audio amplifier

9 said And Gate being interconnected by electrical leads to said timer mechanism to receive

10 a signal from said time mechanism to relay the stored sound on said sound recorder to said

11 audio amplifier, and said And Gate having a second electrical lead extending to said sound

12 recorder to receive audio signals from said sound recorder, with said And Gate adapted to

13 activate said amplifier upon the activation of both said interconnected lead from said timer

14 mechanism and activation of said lead from the said audio recorder.
